

Bug Report – SM Solutions Help Desk System

Author: Alulutho Tokwe and Awonke Lubelwana

Date: 13 March 2026

User Side

Bug ID: User01

Title: Email Verification Not Sent During Account Registration

Description:

When a user registers for a new account, the system is expected to send a verification email to confirm the user's email address. However, the application fails to send the verification email, preventing the user from verifying their account and accessing the system.

Preconditions:

- The application allows the user to enter registration details.
- The user can select a role from the dropdown menu.
- The user can click the Register button to create an account.
- The user should be able to log in after verifying their account.

Steps to Reproduce:

1. Open the application website.
2. Click on the Register link.
3. Enter valid credentials in the registration form.
4. Select a role from the dropdown menu.
5. Click the Register button.
6. Attempt to log in to the application.

Severity: Critical / High

Priority: High

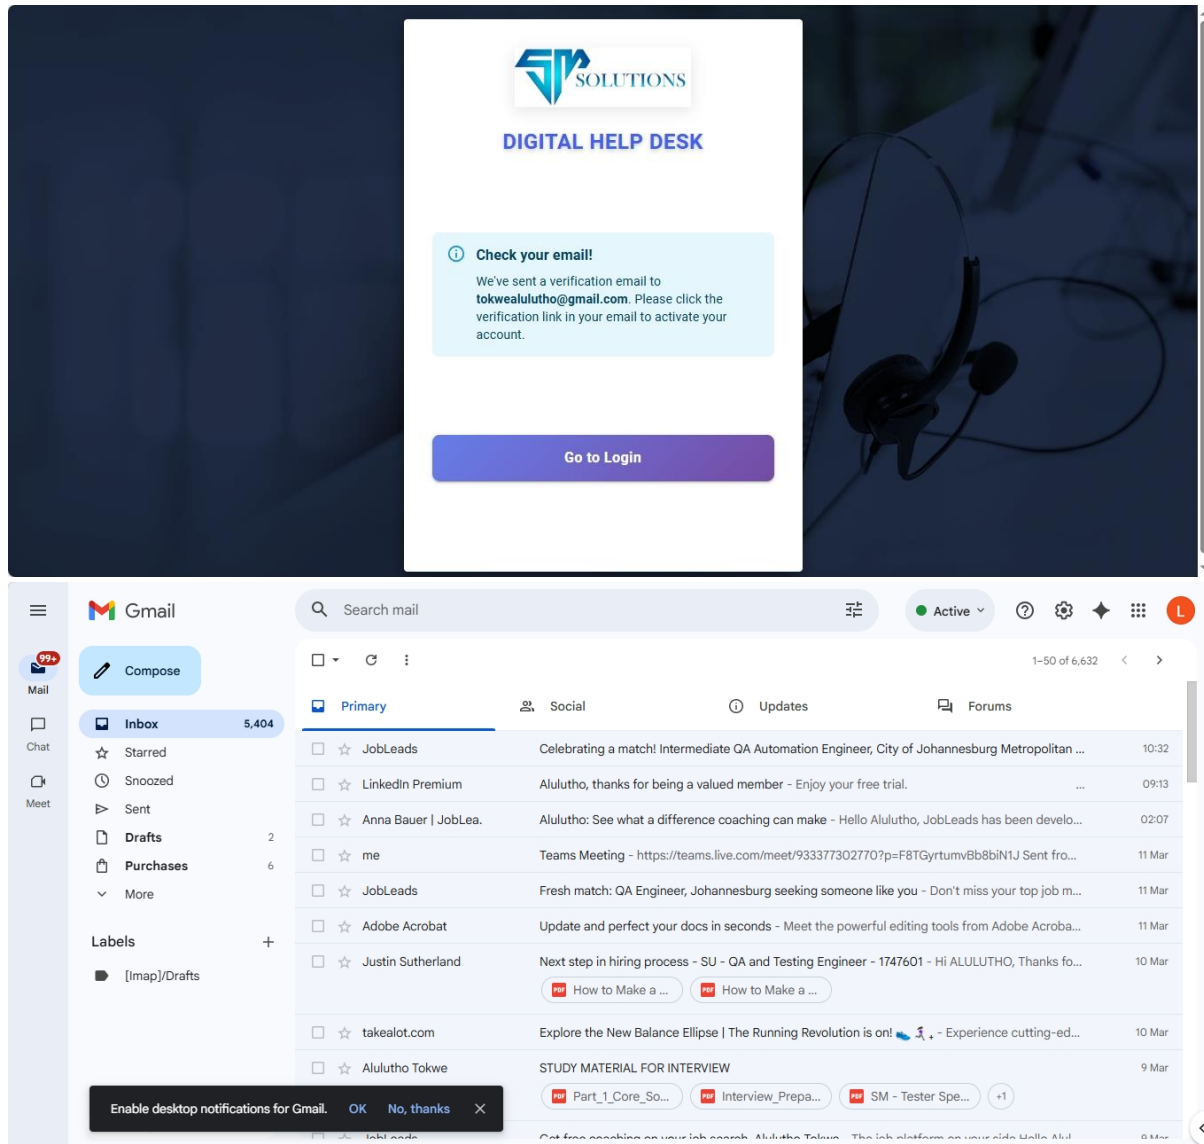

Expected Result:

After successful registration, the system should send a verification email to the user's email address. Once the account is verified, the user should be able to log in successfully.

Actual Result:

The system does not send a verification email after registration. As a result, the user cannot verify their account and is denied access to the application.

Evidence:

Bug ID: User02

Title: No Validation Error Message for Invalid Email Address During Registration

Description:

When a user enters an invalid email address during account registration (for example, an email address without the “@” symbol), the system does not display a validation error message.

Preconditions:

- The application allows users to enter registration details.
- The system should validate the email address format.
- The system should display an error message if the email format is incorrect.

Steps to Reproduce:

1. Open the application website.
2. Click the Register button.
3. Enter an invalid email address (e.g., without the “@” symbol).
4. Select a role from the dropdown menu.
5. Click the Register button.

Severity: High

Priority: High

Expected Result:

The system should display a validation error message indicating that the email address format is invalid and prompt the user to enter a valid email address.

Actual Result:

The system allows the user to click the Register button but does not display any error message or proceed to the next page.

Title: Password Reset Functionality Not Working

Description:

When a user selects the Forgot Password option and enters their email address to reset their password, the system displays an error message instead of sending a password reset link.

Preconditions:

- The user must have a registered account.
- The user must have access to the login page.

Steps to Reproduce:

1. Open the application website.
2. Click on the Forgot Password link.
3. Enter a registered email address.
4. Click the Send Reset Link button.

Severity: High

Priority: High

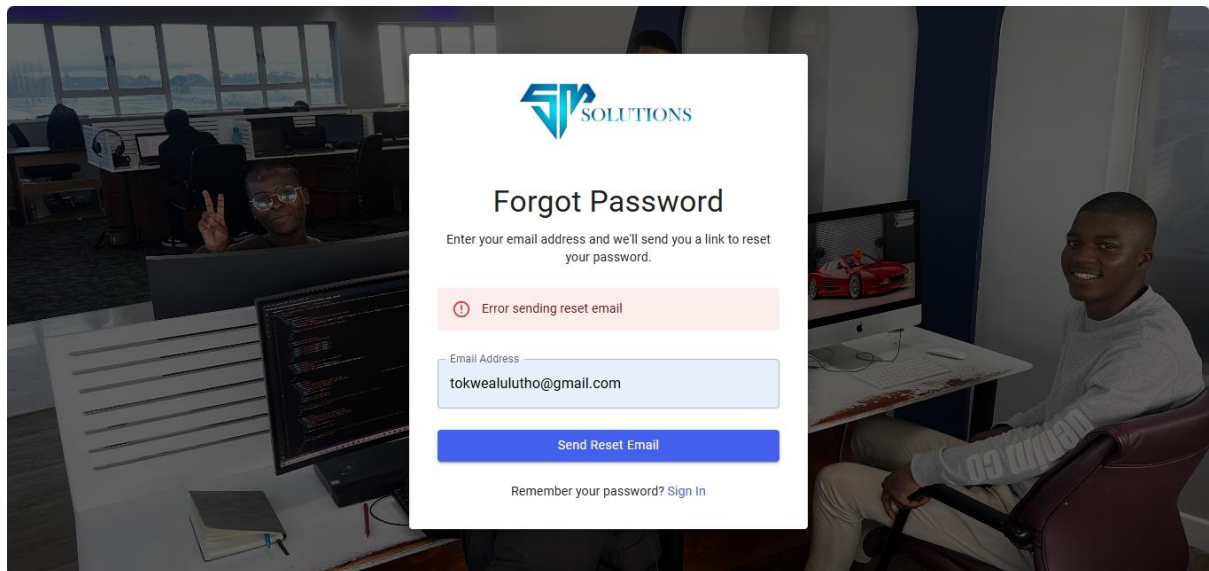

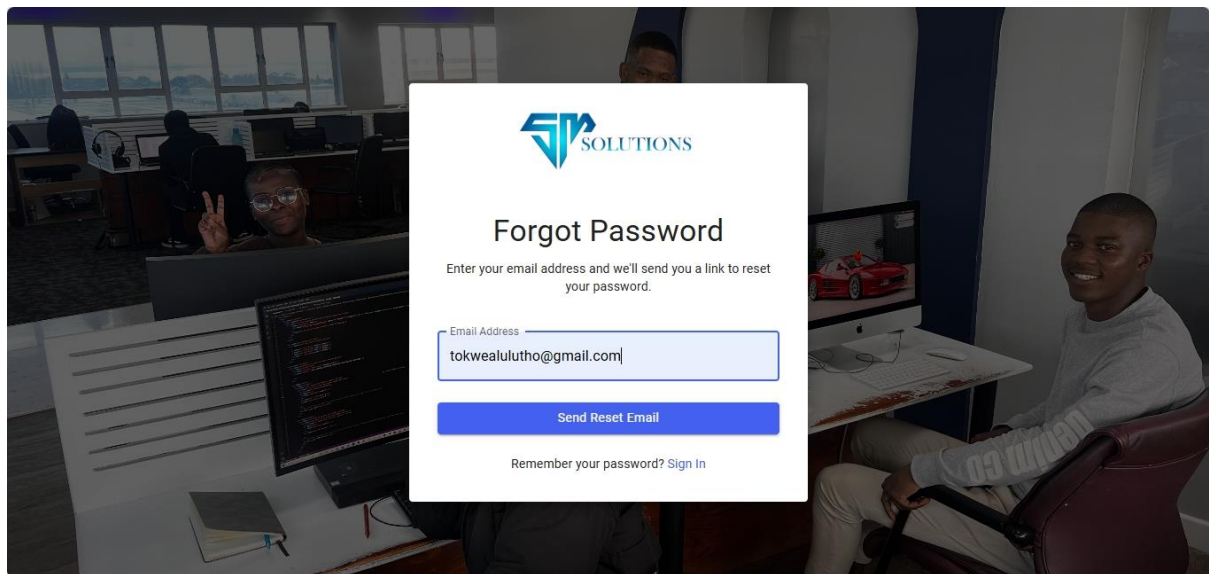

Expected Result:

The system should send a password reset link to the provided email address, allowing the user to change their password.

Actual Result:

The system displays an error message and does not send the password reset link.

Title: Verification Email Not Sent After Account Registration

Module: User Registration / Email Verification

Severity: Critical

Priority: High

Description: After a user successfully registers an account on the SM Solutions Digital Help Desk platform, the system displays a message indicating that a verification email has been sent. However, the user does not receive the verification email in their inbox, preventing them from verifying their account and accessing the system.

Preconditions:

- The user has access to the SM Solutions Digital Help Desk website.
- The user has a valid email address.
- The registration form is accessible.

Steps to Reproduce:

1. Open the SM Solutions Digital Help Desk website.
2. Click on Register to create a new account.
3. Enter valid registration details, including a valid email address.
4. Select the appropriate role (e.g., Support Staff or User).
5. Click the Register button.
6. The system displays a message instructing the user to check their email for verification.
7. Navigate to the registered email inbox.

Expected Result: The system should send a verification email containing an activation link to the registered email address. The user should be able to click the link to verify their account and then log into the platform.

Actual Result: The system displays a message indicating that a verification email has been sent, but no verification email is received in the user's inbox.

Title: Password Reset Functionality Not Working

Description:

When a user selects the Forgot Password option and enters their email address to reset their password, the system displays an error message instead of sending a password reset link.

Steps to Reproduce:

5. Open the application website.
6. Click on the Forgot Password link.
7. Enter a registered email address.
8. Click the Send Reset Link button.

Severity: High

Priority: High

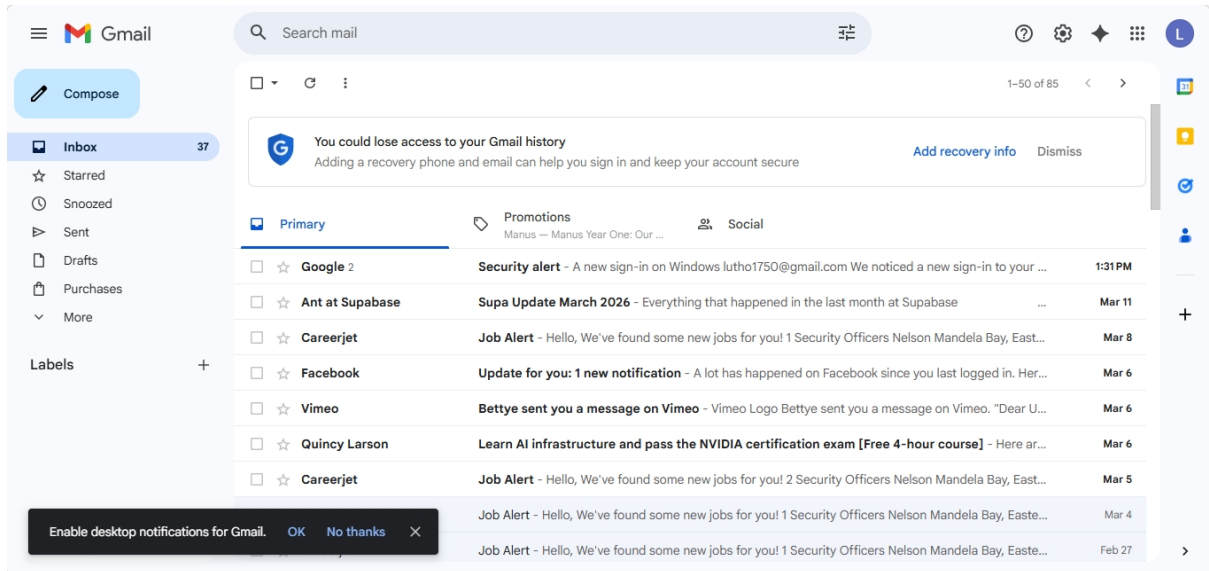

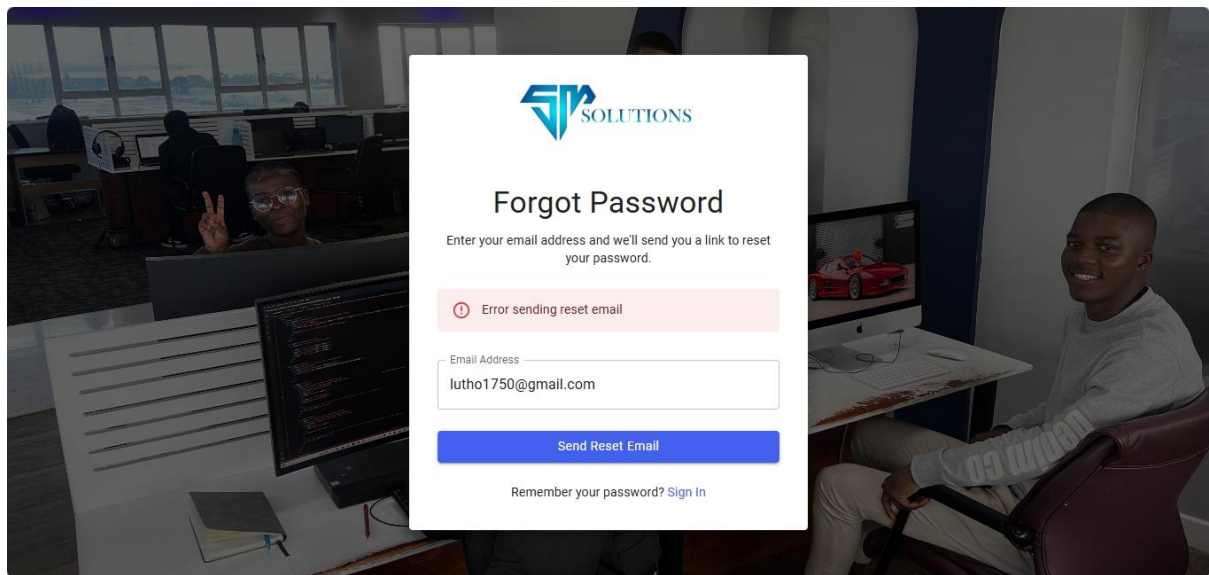

Expected Result:

The system should send a password reset link to the provided email address, allowing the support staff to change their password.

Actual Result:

The system displays an error message and does not send the password reset link.

Evidence:

Admin Side

Bug ID: Admin01

Title: Invalid Data Displayed in Ticket Assignment Dropdown List

Description:

Within the Ticket Management section, the dropdown list for assigning tickets should contain the names of available IT technicians. However, the dropdown list includes names or values that appear to be test data or invalid entries that do not represent actual technicians.

Preconditions:

- The admin must be logged into the application.
- The system should display only valid technician names in the assignment dropdown.

Steps to Reproduce:

1. Log into the application using administrator credentials.
2. Navigate to the Ticket Management section.
3. Click on the dropdown list under the Assigned To column.

Severity: Medium

Priority: Medium

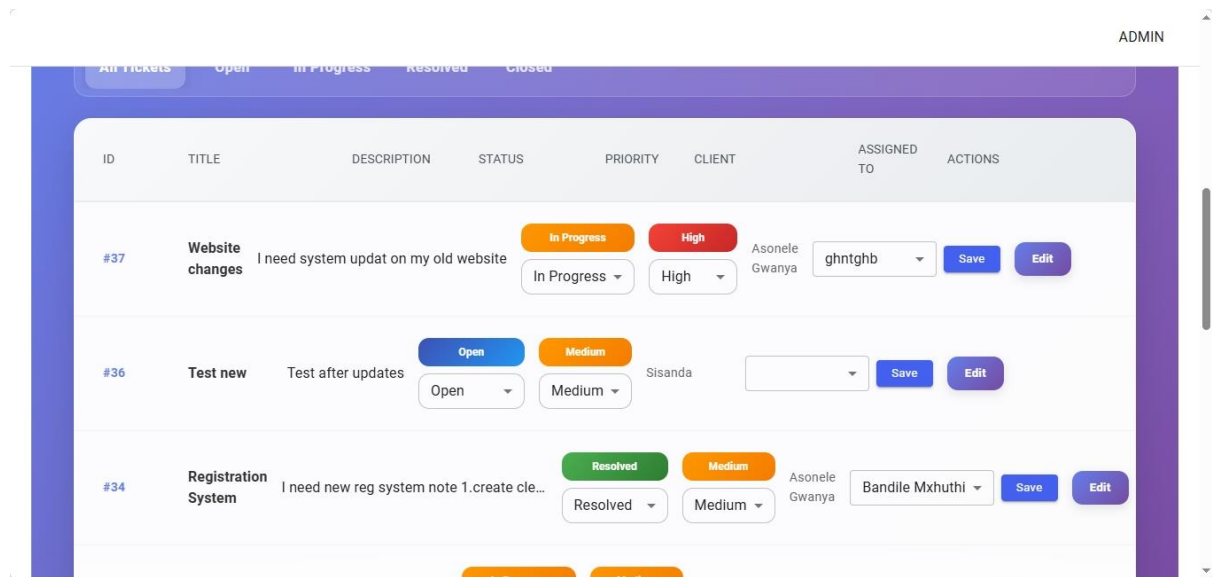

Expected Result:

The dropdown list should display only the names of valid IT technicians who can be assigned tickets.

Actual Result:

The dropdown list displays invalid names or entries that appear to be test data and do not represent real technicians.

Evidence:

Bug ID: Admin02

Title: Save Button Not Responding When Updating User Role

Description:

When attempting to update a user's role in the User Management section, the **Save** button does not respond after making changes. The button appears to be non-clickable or inactive, preventing the administrator from saving the updated user role. As a result, the system does not apply any changes made to the user details.

Preconditions:

- The administrator must be logged into the application.
- The system must display the list of users with the option to edit user details such as role, name, or other information.

Steps to Reproduce:

1. Log into the application using administrator credentials.
2. Navigate to the **User Management** section.
3. Locate a user from the list.
4. Click the **Edit** button for the selected user.
5. In the edit form, navigate to the **Role** dropdown list.
6. Change the role to another available option.
7. Click the **Save** button to apply the changes.

Severity: High

Priority: High

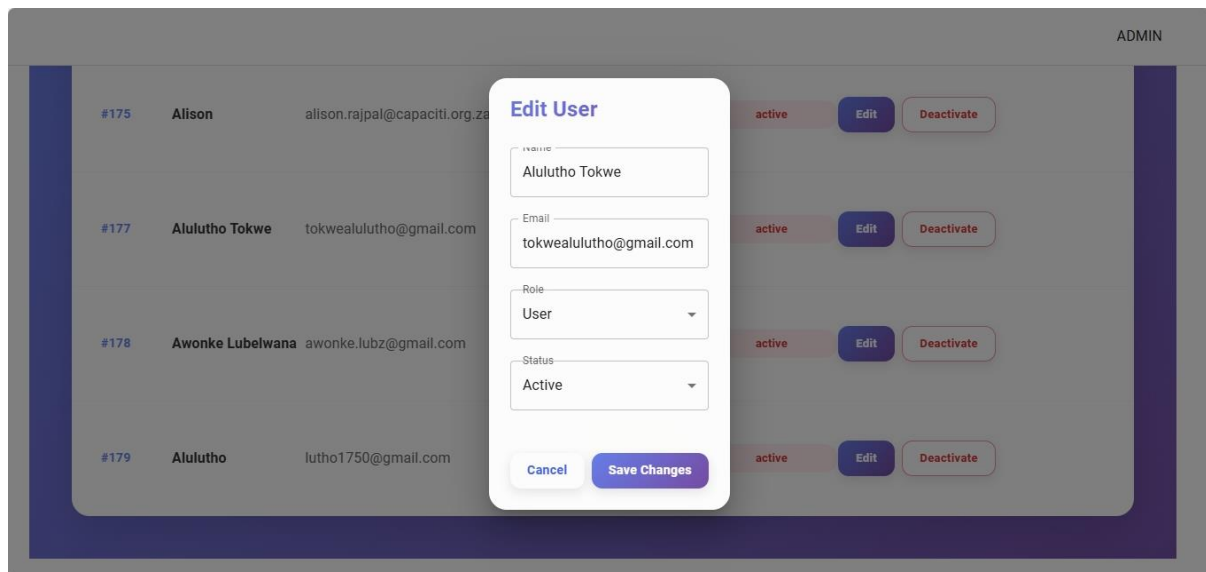

Expected Result:

The system should allow the administrator to modify the user's role and successfully save the changes when the **Save** button is clicked.

Actual Result:

After changing the role and clicking the **Save** button, the button does not respond, and the changes are not saved.

Evidence:

Cross Device Manual Test

Title: UI Elements Overlapping and Horizontal Content Clipping on Mobile View

Description: When accessing the Admin Dashboard and Tickets Management sections on a mobile device, several UI elements fail to scale correctly. The Administrator profile tag overlaps the main page heading, and the Ticket Management table is clipped at the right margin. This prevents the admin from seeing full ticket descriptions and creates a cluttered, unprofessional interface that hinders navigation.

Preconditions:

- The administrator must be logged into the application via a mobile browser (iOS/Android).

- The system must contain at least one ticket with a description to populate the table.

Steps to Reproduce:

1. Log into the application using administrator credentials on a mobile device.
2. Observe the **Admin Dashboard** header and the floating "Banele..." profile tag.
3. Navigate to the **Tickets Management** section.
4. Select the **Open** tab to view the ticket list.
5. Attempt to read the full "Description" column for any ticket (e.g., Ticket #36 or #32).

Severity: Medium (Interface usability is impacted, and data is obscured).

Priority: Medium

Expected Result:

- The admin profile tag should be positioned in a dedicated header space or scaled down to avoid overlapping the "Admin Dashboard" title.
- The Tickets table should be fully responsive; columns should either wrap text, or the container should allow horizontal scrolling, so no data (ID, Title, or Description) is cut off.

Actual Result:

- The profile tag sits directly on top of the "Admin Dashboard" text, making it difficult to read.
- The "Description" column is truncated by the edge of the screen, and there is no horizontal scrollbar or responsive "card" view to see the hidden text.

Evidence:
